## **DETAILED ACTION**

### ***Drawings***

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "additional spring member" (claim 46) must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Specification***

The abstract of the disclosure is objected to because it exceeds the limit of 150 words. Correction is required. See MPEP § 608.01(b).

Art Unit: 3745

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 27-52 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 27 recites "a displaceable piston" in line 4 and "two pistons" in line 8, it is unclear whether the "displaceable piston" is one of or in addition to the "two pistons".

Claims 31, 32, 35, 36, 40-42, and 49 recite the limitation "the piston" in multiple locations. There is insufficient antecedent basis for this limitation in the claim. Claim 27 recites "a displaceable piston" in line 4 and "two pistons" in line 8, it is unclear which piston is "the piston" (reference characters recited in the claims are not considered to be limiting, see MPEP 608.01(m)).

Claims 28-30, 33, 34, 37-39, 43-48, and 50-52 are rejected due at least to their dependence from claim 27.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 27, 28, and 47-49 are rejected under 35 U.S.C. 102(b) as being anticipated by Leigh-Monstevens et al (4914916).

Art Unit: 3745

Leigh-Monstevens et al discloses a device for monitoring the position and movement of a brake pedal, the device including a master cylinder (10) with an integrated position generator for monitoring the position of a displaceable piston (32, 34) within a housing, the position generator includes a magnet (32c, 34c) as a signal transmitter which transmits a magnetic field in the direction of a sensor element (56, 58) being stationary on the housing, and is connectable to an electronic control unit, wherein the magnet is arranged between two pistons (32, 34) and is displaceable in relation to at least one of the pistons. Wherein at least two spring members (36, 38) are provided, by way of which the magnet is retained between the pistons and is arranged so as to be displaceable in relation to at least one of the pistons, the sensor element is arranged in an accommodation (~64) that can be fixed in a defined position on the housing, the sensor element along with rigid conductor elements is received in the accommodation in a form-locking manner, an electric connecting line (92) can be slipped into a plug device (90) of the accommodation, and the accommodation is adjustable in the actuating direction of the piston and in relation to the housing and can be fixed in a defined position.

#### ***Allowable Subject Matter***

Claims 29-46 and 50-52 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

#### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. 6619039, 6886333, and 7086228 each disclose master cylinders with piston position detection.
